# The School of Software Testing & Product Quality

Who are we?

A leading institution specializing in software testing and quality assurance engineering.
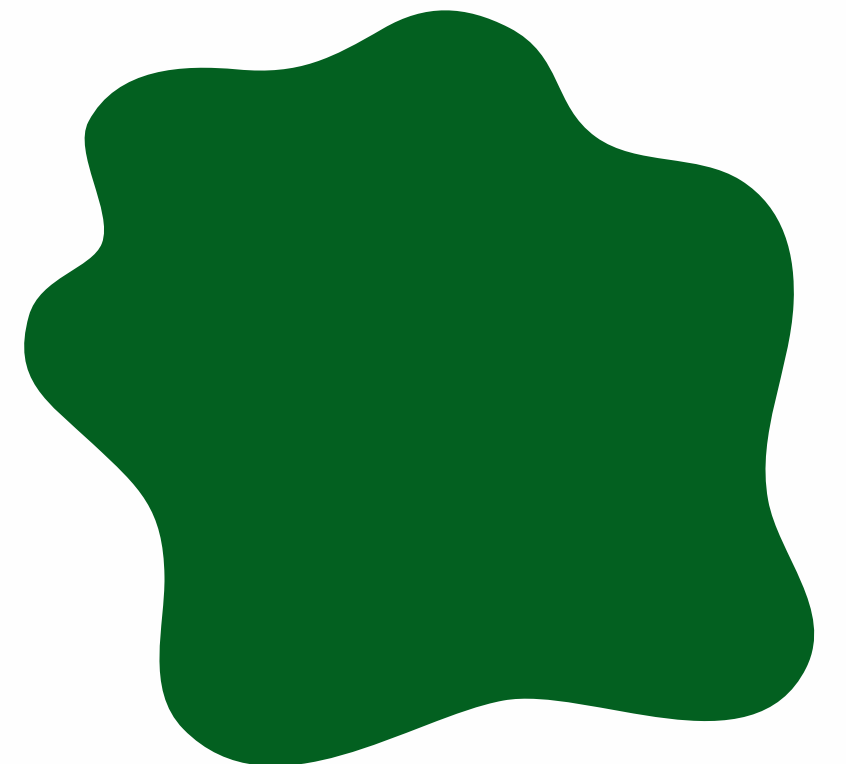

Our Services

A leading institution specializing in software testing and quality assurance engineering.

- Our comprehensive program at The QA School equips students with in-depth knowledge of testing methodologies, automation tools, and industry best practices.

- Need thorough software testing without building an in-house team? Streamline your software development process with The QA Institute's expert STAAS testing solutions.
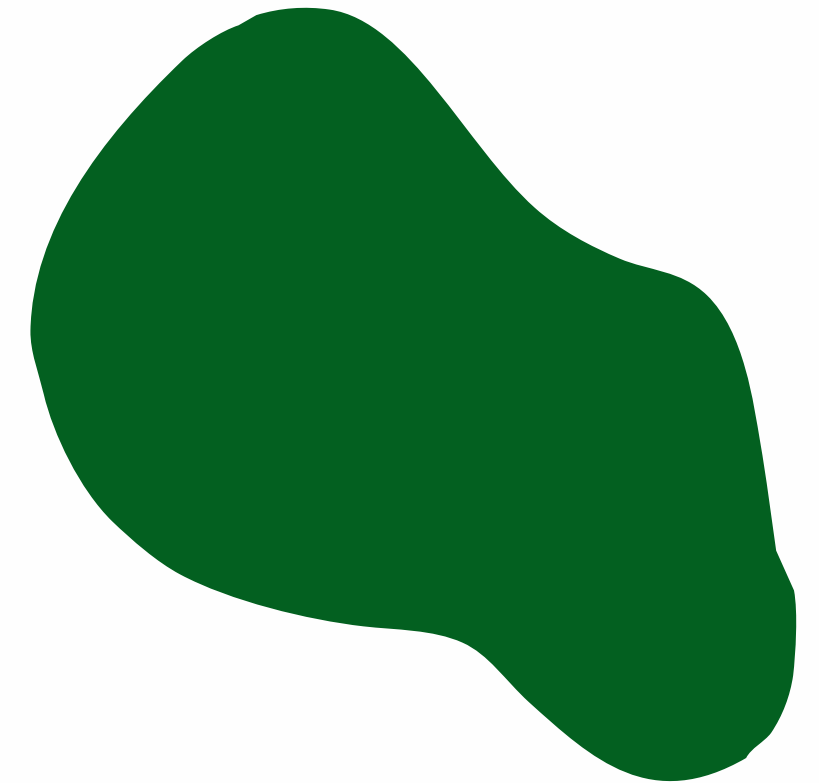

Who Is The QA School For?

The QA School is for anyone who wants to switch to **Software Testing** and Product Quality, otherwise known as **Software Quality Assurance.**

People with NO Technology background can seamlessly transition via our Software Testing Course. Without having to code.

People with Technology background such as Web developers, Project managers etc can also seamlessly transition into Software Testing to broaden their knowledge.
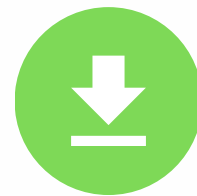

Our Modus Operandi

With a focus on hands-on experience, our students engage in real-world projects, gaining practical skills essential for a successful career in software quality assurance. Our expert instructors, who bring extensive industry experience, guide students through theintricacies of test planning, execution, and defect tracking.

Graduates leave our program not only with a solid theoretical foundation but also with the practical expertise demanded by today's dynamic software testing landscape.

Live-Classes   Downloadable resources   Certificate of completion

Our Curriculum
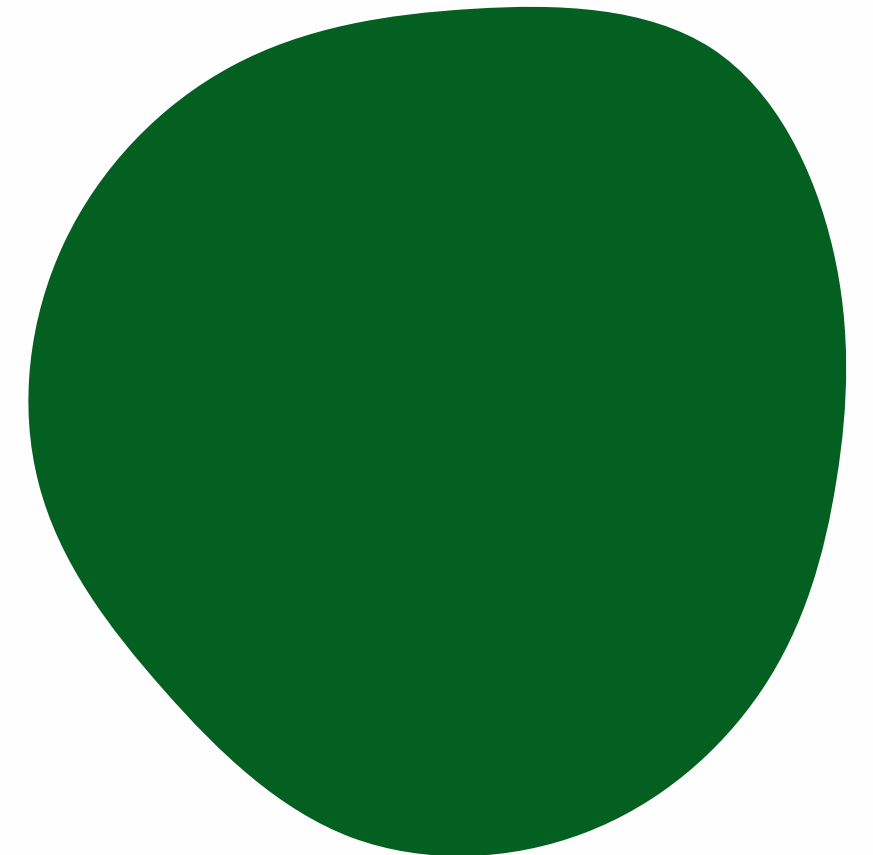

- **Software Testing For Beginners**

Manual QA + The QA School Certification

- **Test Automation**

Automation Testing + The QA School Certification

- **International Certification Exams**

We help you prepare for your ISTQB certification

What Our Students Are Saying

My internship has been a rewarding journey. I've gained hands-on experience, learned from a supportive team, and had the chance to apply classroom knowledge to real-world scenarios. Overall, it has been a positive and enriching experience.
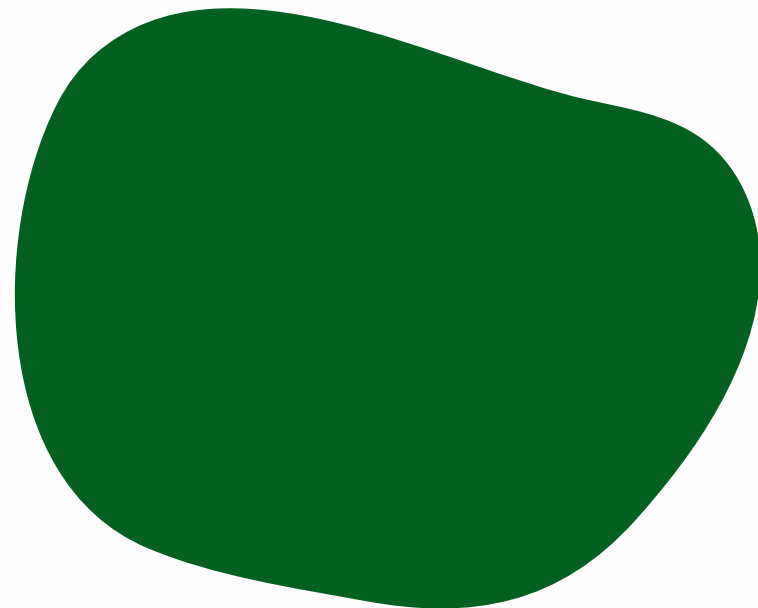

I particularly enjoy the hands-on projects the most during my internship. This allows me to apply theoretical knowledge to real-world scenarios, fostering both skill development and a deeper understanding of the industry"
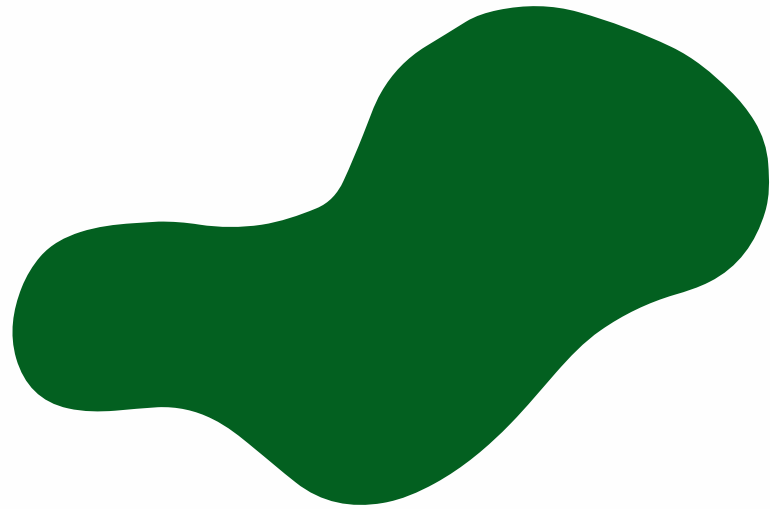

Esther

My trainer is a good trainer to work with. He took his time to explain to us in detail the task to be done, how to work in an agile environment, and the software development life cycle. My favourite part of the training was writing test scripts and creating tasks or tickets on Jira and I can't wait to start the automation testing"

Live classes | Capstone Project | Alumni Community| E-books | CV Review

Modules
- -Basics of Software Development Life Cycle
- -Fundamentals of Testing
- -Testing Techniques and Test Planning
- -Understanding the Software Testing Life Cycle
- -Requirement Analysis, Test cases and Test Scripts
- -Test Execution and Bug Documentation
- -Mobile and Web Testing
- -API Testing

Electives
- -LinkedIn Profile Optimization
- -Understanding the Agile Mindset and Scrum Framework
- -Task Management and collaboration tools
- -Preparation for job interviews
- -One on One Mentorship Sessions with QA industry expert
- -Branding and Positioning as a Software Tester/QA Engineer
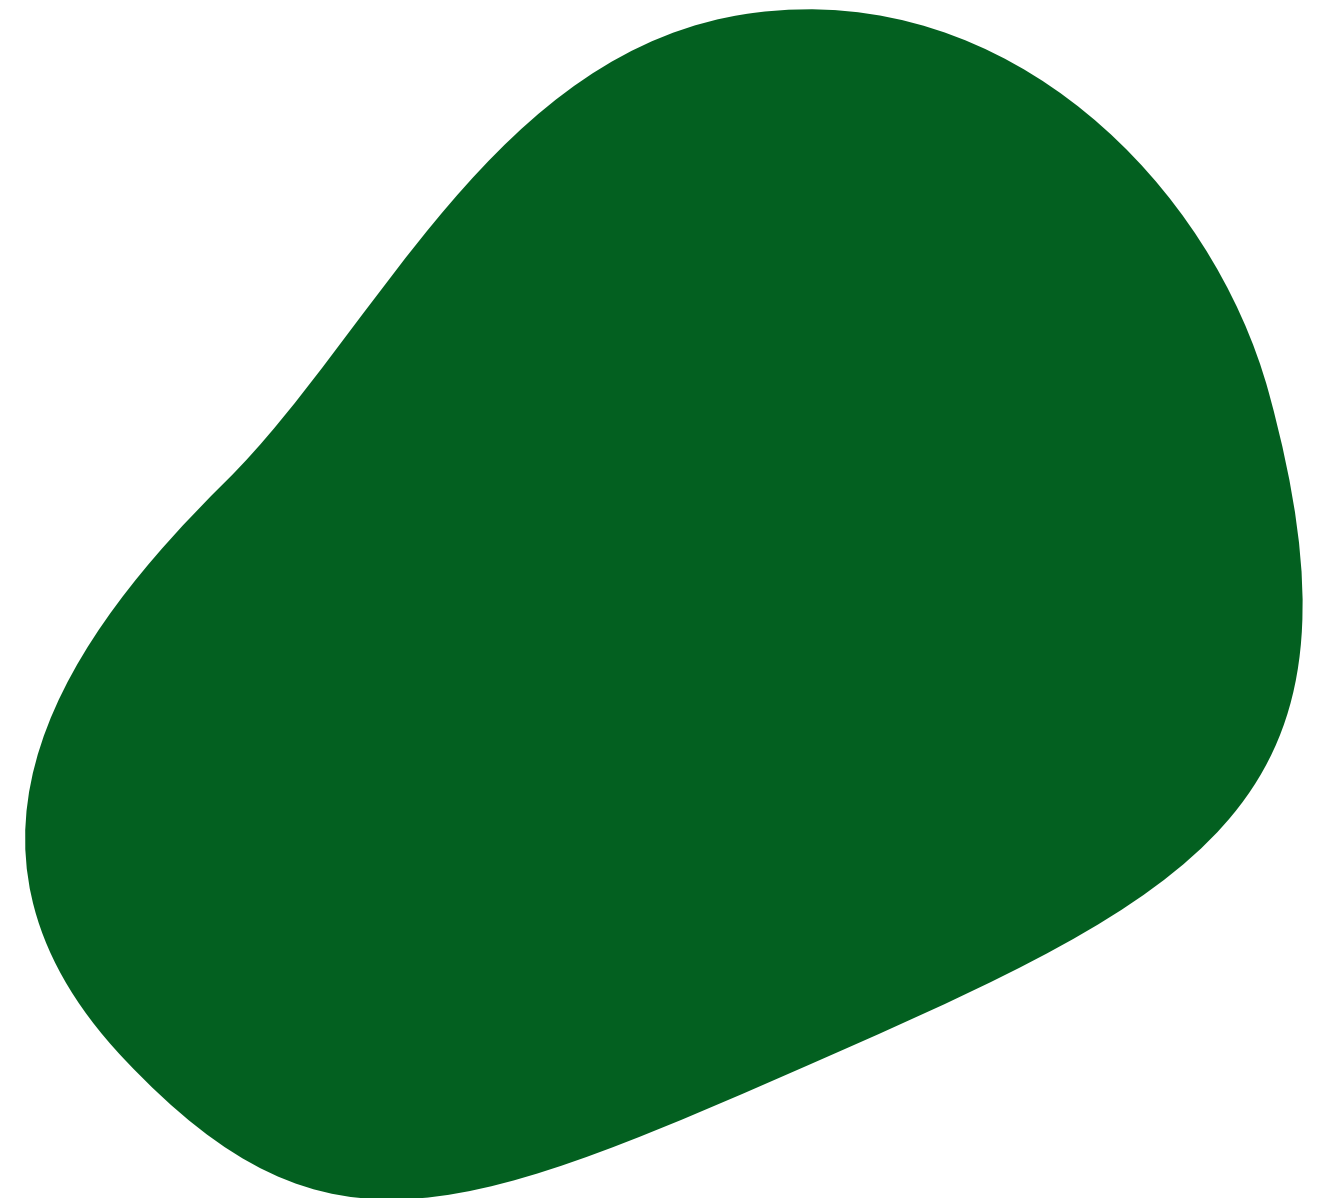

SOFTWARE TESTING FOR BEGINNERS

Our Mission

- To build highly skilled and excellent Quality Assurance Engineers and Software Testers, empowering our students through our intensive, in-depth and real-world scenarios curriculum.

- We are committed to fostering a collaborative learning environment, transforming aspiring professionals into industry-ready leaders.
